Roadmap TUTORIAL: Creating a reoccurring node (like a notebook) on Roadmaps

Roadmap Tutorial:1

Creating a reoccurring node (like a notebook) on Roadmaps

Prepared by:
Liat Copel, Univ of Michigan

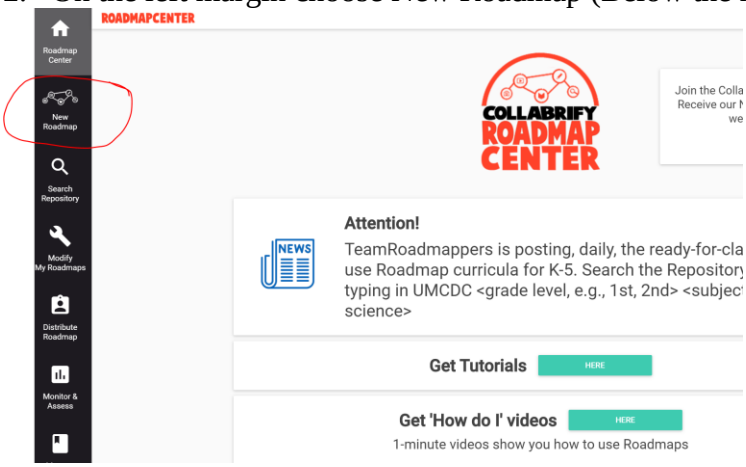
In this tutorial, you will practice: (1) Creating a reoccurring node or an activity that students can come back to from lesson to lesson such as a reading log or a notebook.
(2) This is an *advanced* tutorial. It's best if you have prior knowledge on how to create maps, accesses maps and use the Roadmap apps prior to reading this tutorial.

. If you have questions or comments, please feel free to email us at:
roadmap.center.info@gmail.com
We will respond within 24 hours – if not sooner! Urgent?
Please feel free to text us at: 734-355-4098

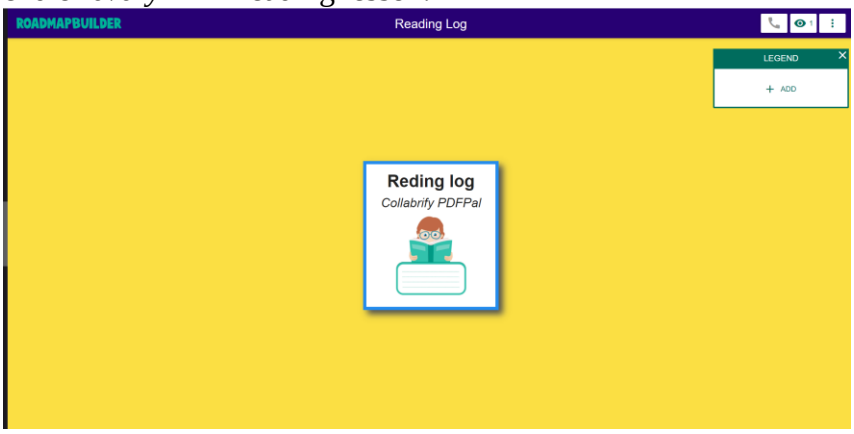
Let's Begin!

1. Please enter the URL – https://roadmap.center/#/ into a browser that is aligned with the standards put forth by the World Wide Web Consortium (e.g., Chrome, Safari, Firefox).

2. On the left margin choose New Roadmap (Below the house icon)

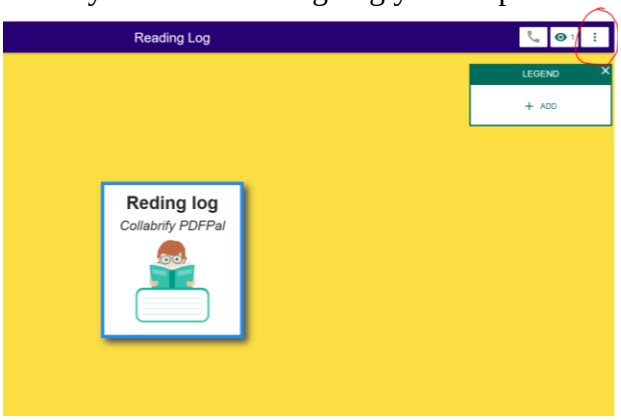


3. Tittle your map and put in the map the activity you want students to go back to from different lessons. For example a PDFpal node with a reading log students will fill at the end of *every* ELA reading lesson.

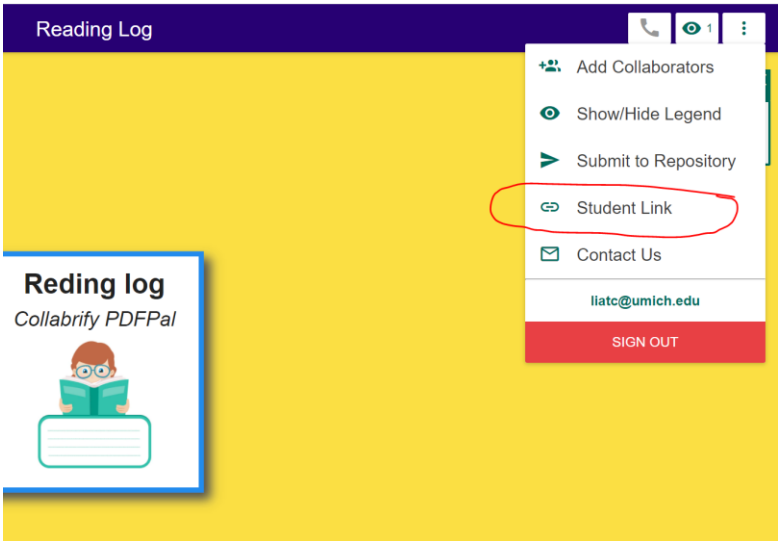


4. Style your map (background, instructions, nodes shapes colors and pictures and links)

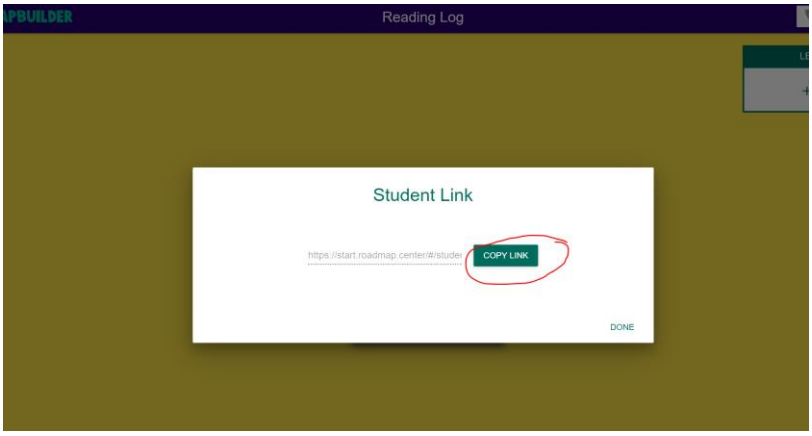
5. When you are done designing your map click on the three dots on the upper right corner



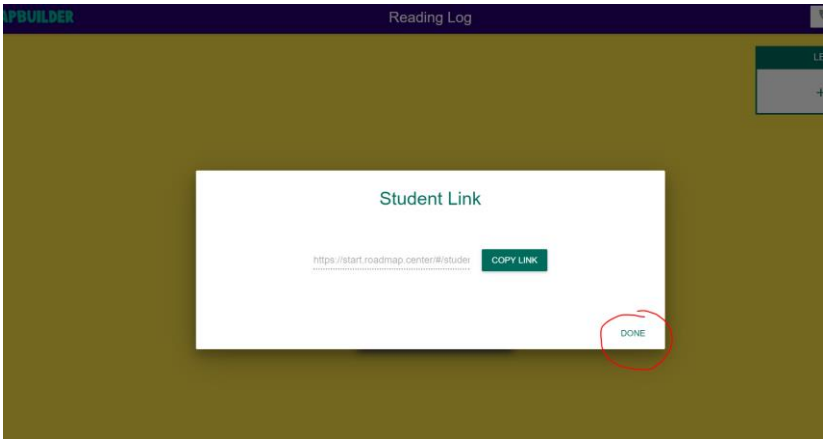
6. Choose student link



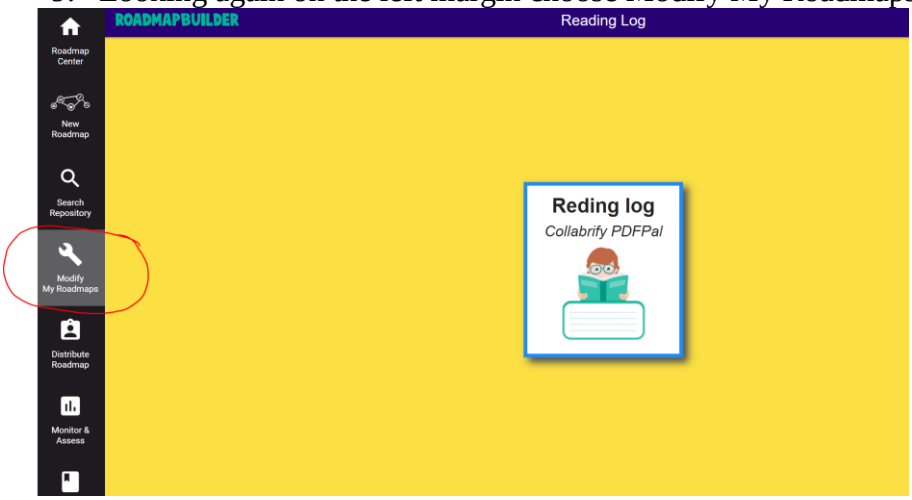
7. The system will generate a student link.
   Then click copy student link.



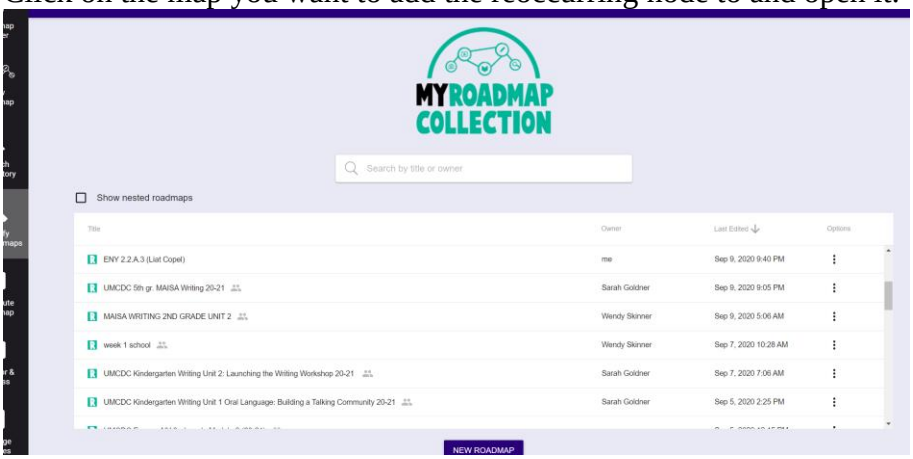
8. Click done to close the window.



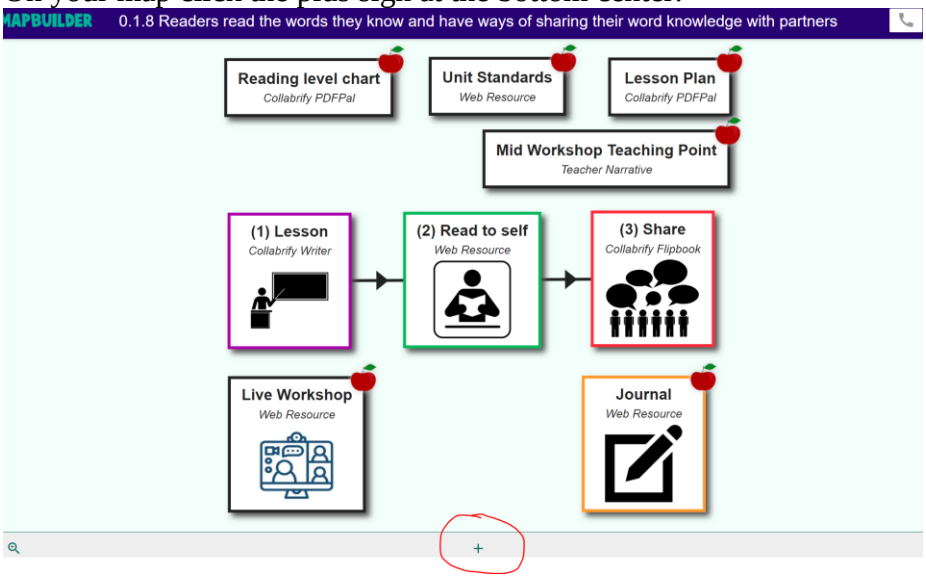
9. Looking again on the left margin choose Modify My Roadmaps (The ranch icon)



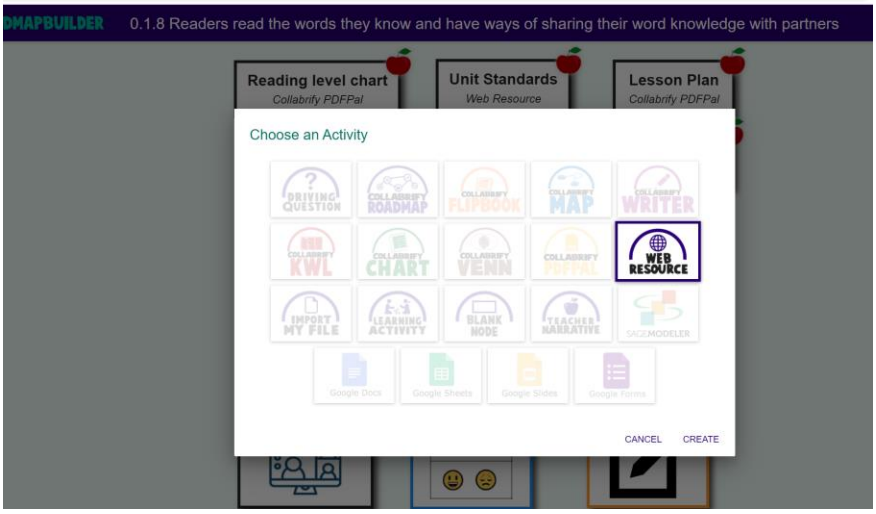
10. Click on the map you want to add the reoccurring node to and open it.



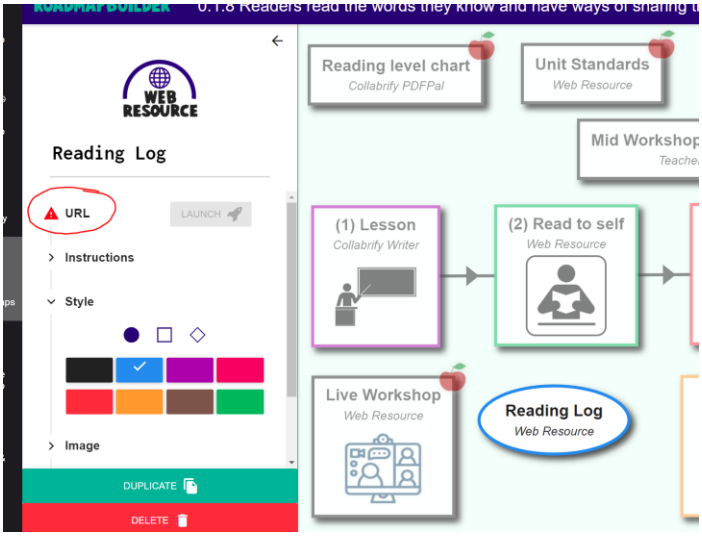
11. On your map click the plus sign at the bottom center.



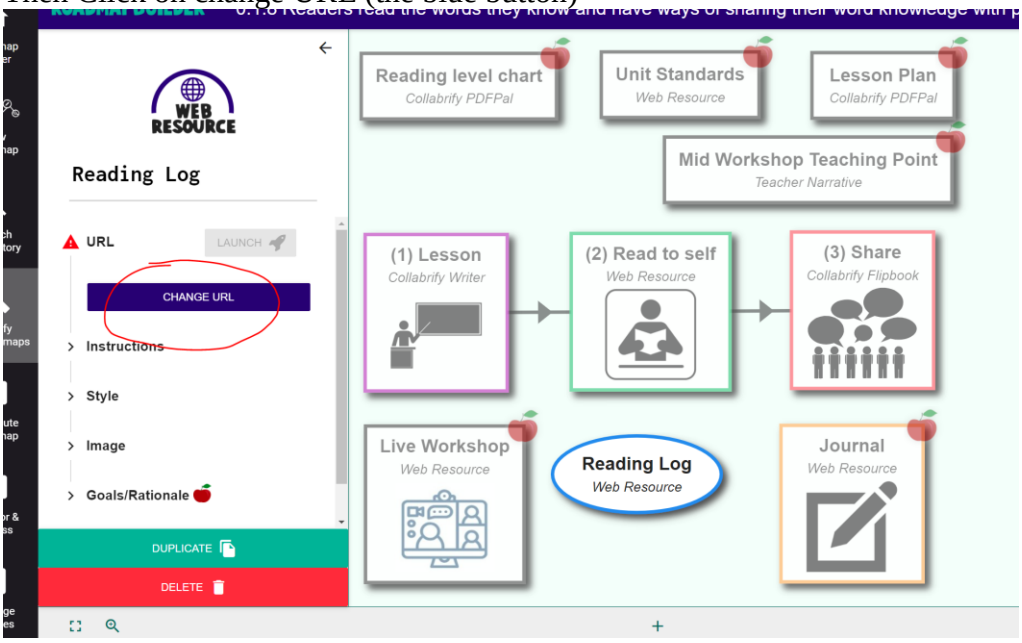
12. Choose web Resource and click create. You can title it, change its color or shape add a picture and link it.



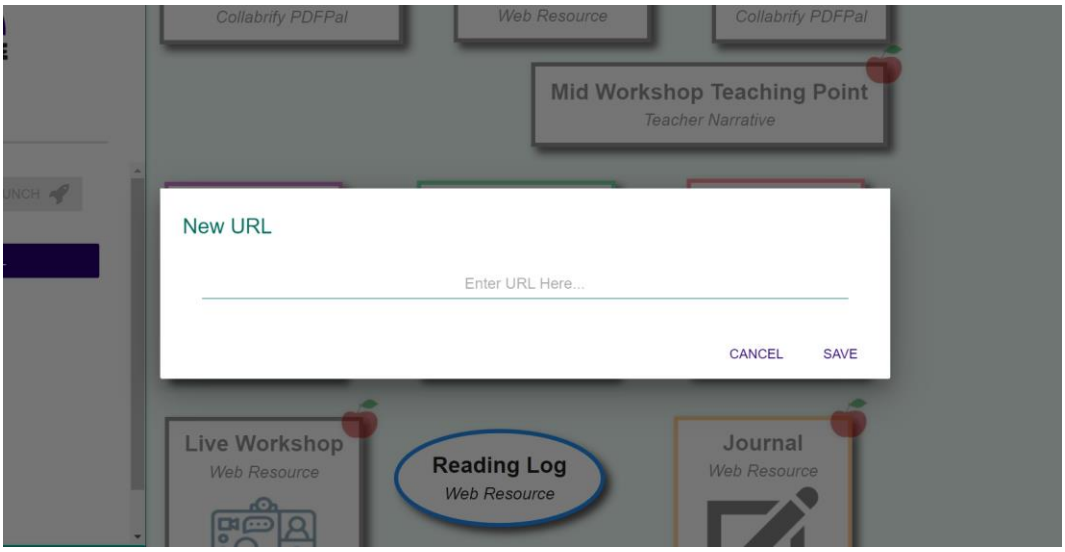
13. Click on the web Resource node you created. A drawer will open on the left. Click on the word “URL”



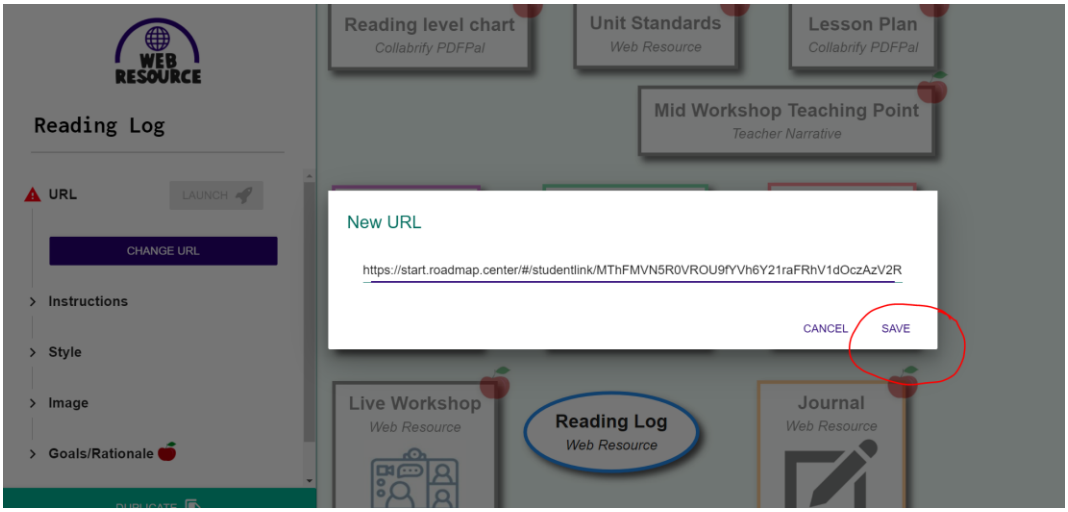
14. Then Click on change URL (the blue button)



15. Into the pop up window paste the student link you copied. To do the click with the right side of the mouse on the line and choose past.

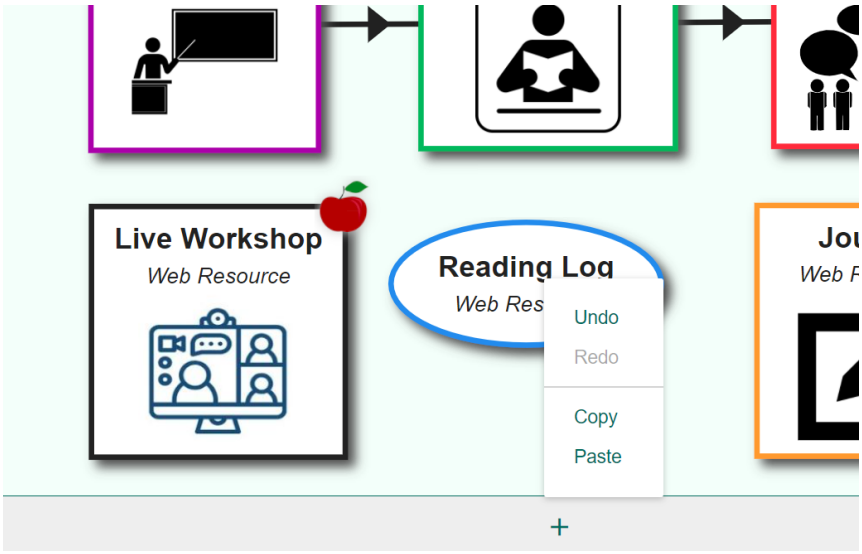


16. Click save.



17. You can a web resource with the same student link for every lesson you want your reoccurring notebook or reading log to appear on.

18. Alternatively you can copy the web resource node you created and past in other maps. To do that right click on the node you want to copy and then choose copy. Go to the map you want to past the node you copied on and click on it's background with a right click, then choose past.



19. Now when students click on the “reading log” or “notebook” node from different maps it will always take them to the reading log to notebook map you created and to the same reading log/notebook they were working on.
